

Roseville GIS and Analytics Internship Program

Developing partnerships to enhance careers

We are looking for talented students to be part of the City of Roseville GIS and Analytics Internship Program. This program is designed to enhance careers by supplementing technical skills with the leadership, teamwork, and business skills that are necessary to successfully identify and solve problems using GIS.

We believe that adding these skills to your GIS knowledge will pay a high return at hiring time as you bring additional experience and in-demand skills to the table. With this in mind, we are developing partnerships with local colleges to match students to this challenging program.

The City of Roseville is known for outstanding services and its vision embraces fiscal health, strong community identity, and a high quality of life. Technology helps achieve this vision and drives the future of the City, which has received recognition and awards for its use of technology.

Program Details

The GIS Internship Program is organized around the project life cycle. Students work together to complete a GIS project that solves a specific problem. They collaborate with members of the City's GIS team to complete all phases of the project including initiation, planning, execution, and closure.

As students develop their team and complete the project, they work together to create GIS data, perform

spatial analysis, and generate outputs. Using GIS as a problem solving and decision support tool is emphasized throughout. Collaboration and building a strong team are also emphasized. Coaching and feedback are key tools as the student team works closely with the City's GIS team.

Technical work is completed using the ArcGIS suite of software and emphasizes solution finding, strong data skills, and creative analytical techniques.

Our Core Values

We believe the best way to work is by collaborating and partnering together, focusing on results, performing at a high level with skill and proficiency, and enthusiastically helping people.

Roseville GIS and Analytics Internship Program

Developing partnerships to enhance careers

Roseville GIS

The Roseville GIS team is actively engaged in the wide ranging functions of a full service city. Our work environment is relaxed but fast paced and results oriented.

The GIS supports police, fire, library, parks and recreation, electric, solid waste, and water/wastewater services along with other municipal functions such as planning, development, and public works.

We pride ourselves on using GIS creatively and collaborating energetically. Our core work is finding solutions using GIS technology but we

rely on strong teamwork, good leadership, and a solid approach to analysis to develop the best solutions.

Join Us

If you like a good challenge and you're passionate about GIS and solving problems, we invite you to join us.

Apply by visiting the City of Roseville at www.roseville.ca.us/jobs.

Accepting the first 30 qualified applications or closing at 5 pm on February 28, 2018, whichever occurs first.

Our Vision

Our team believes data tells stories and discovering them yields invaluable insights.

To this end we are engaged in:

- Creating innovative solutions that unlock the power of data
- Turning data into knowledge that supports decision making
- Maintaining the highest quality data
